CENTRO

CLINICAL DOCUMENTATION

Centro delivers a true electronic medical record for the Healthcare market. An all-encompassing charting workspace, Centro provides physicians with a method to intuitively create and manage their documents on the fly. This facility wide solution cost-effectively incorporates input from physicians and nurses to build a complete medical record containing a comprehensive patient history.

FLEXIBLE INPUT. Centro puts the physician back in control of documenting patient treatment by allowing the individual to use their preferred input method, from microphone dictation, voice or handwriting recognition, charting on anatomical images, form fill, or a combination of these methods. The integration of these advanced technologies enable each physician to work in their most efficient manner. Furthermore, the Assisted Clinical Documentation feature presents the physician with a partly constructed medical report based on template and input from previous reports, lab results and ADT data, saving physicians hours per day of repetitive documentation.

PATIENT CENTRIC. By interfacing with the HIS or Scheduling System, physicians are presented with a configurable "to-do" list or "calendar-view" of patients that have been scheduled for an appointment or are currently admitted to an area of the facility that the physician is responsible for. The physician is guaranteed to receive the most updated information instantly, such as room location, bed number and appointments, thus simplifying the user experience. The to-do list can be easily accessed via tablet, notebook or smartphone, enabling the physician to benefit from bedside charting and dictation capabilities.

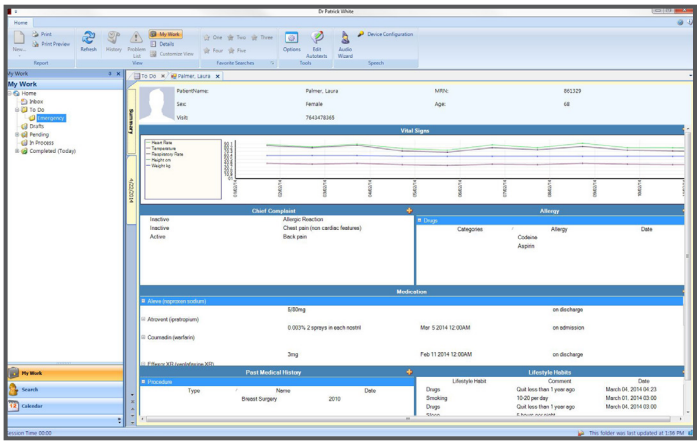
KEY FEATURES

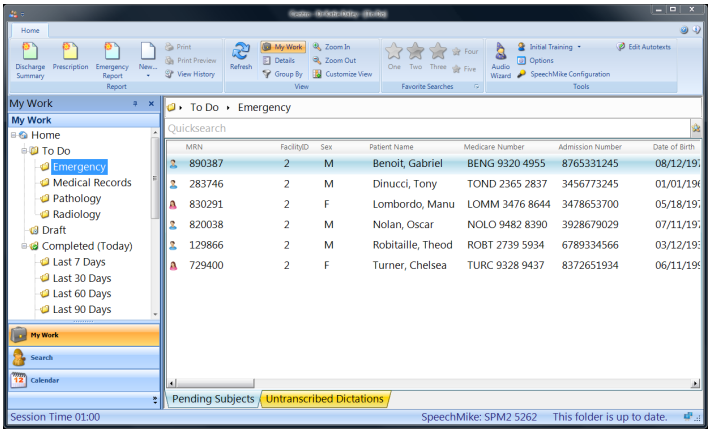
- > Fingertip Access to Patient History
- > Choice of Input Method
- > Digital and Biometric Signature
- > Multiple Signature Workflow
- > Instant Report Creation
- > Mobile Capabilities
- > Reusable Data
- > PACS/RIS Integration
- > Citrix Support
- > Patient Summary

ELECTRONIC FILE. Completed reports are broken down by visit date and reason for visit, meaning that the physician has fingertip access to a patient's information and previous history, via multiple folder view, when creating a new report. The user can also search for documentation created by other physicians, if authorized. In addition, pertinent information such as allergies, findings or current medications can be carried throughout the document life cycle from Initial Note, to Progress Note, to Surgical Note and finally to Discharge. In essence, the group of Centro documents evolves into the electronic patient file.

ALERTS & NOTIFICATIONS. Patient care is reliant on timely and accurate information. Physicians can make more informed decisions when they have all the data they need. Centro can alert the correct ordering physician instantly by email, phone or pager when a dictation, report, or test result has been received.

PATIENT SUMMARY. The Summary is a powerful tool which provides healthcare professionals with a snapshot of a specific patient's condition at any given time. The provider can insert and view customizable data such as medications, immunizations, vitals, lab results and much more, without the need to create a report.





COLLABORATIVE REPORTING. Collaborative reporting improves communication between healthcare providers by allowing all members of a patient's healthcare team to contribute to a medical document, such as a Progress Note or a General History type document. The end result is an accurate and complete document compiled by the individuals who actually treated the patient.

FINAL OUTPUT. The sections of the report are assembled in the background into a final report, containing all formatting including logos, headers, and footers. The physician can essentially view the compiled document and make corrections before electronically authenticating the report. Documents are then automatically distributed to referring and attending physicians and the reporting cycle can begin over again. Charting patient care via dictation, handwriting and keyboard has never been this effortless. Centro is without a doubt the most robust charting workspace available today!
