

m*modal™

MOBILE SOLUTIONS

Healthcare is fast-paced; physicians need tools that keep up with their demanding workloads. That includes the ability to capture the patient story anywhere, anytime. **M*Modal Fluency Flex™ Mobile** lets you do just that, and more.

M*MODAL FLUENCY FLEX™ MOBILE

We provide a mobile solution to dictate important patient information straight from the iPhone and then allow the physician to review the audio recording and send it to transcription.

THE CHOICE IS YOURS

Enhance your M*Modal Fluency for Transcription™ platform by empowering your physicians to take control of their workflow.

M*Modal Fluency Flex Mobile is part of our integrated transcription solution that builds on M*Modal technology to deliver greater efficiency and ease to physician workflows. To support the natural and individual workflows of physicians, M*Modal Fluency Flex Mobile provides them with the capability for mobile document creation so they can focus on what matters most — patient care.

A distinct advantage of using M*Modal Fluency Flex Mobile is that it uses the same cloud-based M*Modal Speech Understanding™ technology powering all of our solutions. So you can easily and instantly use existing physician voice profiles for optimal accuracy. And there's no need to train the system — it already knows and recognizes your voice profile.

WHAT IS M*MODAL FLUENCY FLEX MOBILE?

An app for mobile dictation that enables physicians to:

- **Save time dictating patient demographic information by:**
 - Scanning the patient barcode sticker with camera.
 - Finding the right patient by name, Medical Record Number, and other fields.
 - Selecting patient from list generated by census interface with real-time updates when connected.
 - View patients in chronological order of their appointment.
- **Get better transcription results with high quality audio.**
- **Utilize quick access dictation solution with easy-to-use recording and playback controls.**
- **Enjoy the flexibility of working when and where they want, including:**
 - Ability to dictate offline with dictation uploading automatically when network connectivity is restored.
 - Ability to suspend jobs for later review/resume/completion.
 - M*Modal Transcription Services priority service level support for rapid turnaround.

SECURE VOICE DATA TRANSMISSION AND STORAGE

M*Modal Fluency Flex mobile applications allow dictations to be sent directly to the M*Modal Cloud server utilizing a secure HTTPS transmission, designed to meet HIPAA and HITECH security protocols.

When a connection is not available, dictations are encrypted and saved to the local device, then sent as soon as the connection is restored.

M*MODAL FLUENCY FLEX REQUIREMENTS

We support M*Modal Fluency Flex Mobile for devices running iOS v6.0 and above, including:

- iPhone 5 (recommended device)
- iPhone 4 and 4S

The app runs on the iPod Touch (4th Gen+) with a Wi-Fi connection. M*Modal Fluency Flex Mobile requires that the facility utilize the M*Modal Fluency For Transcription platform.
