

## Lanier Voice Pocket Dictate

### Dictate and send recordings on the go from your iPhone or Android device

Pocket Dictate is a voice recorder for iPhone or Android device. Dictate directly on your phone, then tap send and the recorded dictation will be compressed, encrypted and sent to your typist by email or FTP automatically.

Professional and portable dictation recording  
Record and send dictation audio files instantly

The Pocket Dictate dictation app is designed to have all the features you need in an easy to use interface, closely mimicking older, more traditional dictation recorders. Pocket Dictate may even replace your old Digital Portable and improve the turnaround on transcription by getting dictations to your typist faster.

### Dictation App Features

- Record and play back dictation on your iPhone or Android Edit, insert or overwrite recorded dictation audio.
- Optional voice activated recording records only while you are speaking.
- Automatic compression of recorded audio files.
- Encryption of recordings prior to transmission to comply with patient or client confidentiality requirements.
- Sends recording in compressed wave (wav) or dictation (dct) file formats.
- Sent files can be managed using Lanier Express Delegate.
- Transcribe dictation files with Lanier Express Scribe.

### Description

Pocket Dictate is a voice recorder for your smartphone. You dictate directly on your device using the controls. When done, tap send and the dictation will be compressed and sent to your typist by email automatically.

For ease of use, operation of the record and playback features is designed to closely mimic that of old style dictation recorders. You can also playback, rewind, insert or overwrite as required using the keys on the front.

This dictation voice recorder is designed to have all the features you need as easy to use as possible and reliable for day-to-day operation. If you install Pocket Dictate you will quickly find it will replace your old Digital Portable and, by using the internet to send dictations, will improve the turnaround on typing.

## Features

- Record and playback dictation using the controls on the device.
- Editing, inserting and overwriting. You can select between record overwrite, record insert and record end modes.
- Optional voice activated recording. When selected Pocket Dictate only records while you are speaking.
- Automatic compression of audio files to reduce upload times and storage requirements.
- Sends recording in compressed wave (wav) or dictation (dct) file formats.
- Sent files can be managed using dictation management software.

All files sent by Pocket Dictate can be transcribed by Lanier Express Scribe Transcription Player Software.
